The 5.0 uses a A76 (or equivalent) battery. This is the value of the wheel circumference that you need to program in to your computer. (Note: inches multiply by 25.4 to get millimeters; millimeters divide by 25.4 to get inches.) Use battery type 2032 (or equivalent) as replacement for the computer.

For 5.0: Use a screwdriver to remove the battery cover.

Place the battery into the compartment with the positive side (+) facing up. Replace the battery the kilometer (km/h) and mile (m/h) symbols will alternately be displayed. If running in inches, as soon as completed you will be out of setup mode.

If you are using kilometer mode, the odometer, ODO, may be programmed. Once the wheel circumference is programmed, the odometer will be shown. The wheel circumference value of 2124 (or your latest wheel circumference setting) will be displayed.

Note 1: You cannot program the odometer, ODO, in miles mode.

Note 2: Your Axiom computer has the ability to easily convert miles in to kilometers and vice versa. After you configure your initial settings, you may switch measuring units at any time. Press the gray button until the gray button blinks and you will have converted units in your computer.

Method 2 - Roll Out Method

Stand your bicycle upright. With your tire inflated to its proper pressure, rotate your wheel so that the valve is located at the bottom. Make a mark of the valve's location on the floor. Roll the bicycle one complete wheel revolution, in a straight line, until the valve is again at the bottom. Mark this new location of the valve on the corresponding point on the floor. Measure the distance between the marks, in millimeters. This is the value of the wheel circumference that you need to program in to your computer. (Note: inches multiplied by 25.4 converts inches into mm, i.e. 1 inch = 25.4 mm.)

Battery Installation and Replacement

Using a coin or screwdriver open the battery cover by twisting counterclockwise. Place the battery into the compartment with the positive side (+) facing up. Replace the battery cover. When no battery is in the unit, stored information will be preserved for approximately 15 seconds.

For 5.0: Use a screwdriver to remove the battery cover.

Use battery type 2032 (or equivalent) as replacement for the computer. The 5.0 uses a 2032 (or equivalent) battery.

Resetting the Computer

If the display shows irregular numbers, press the AC (Auto Clear) button on the back of the unit.

To clear the display on the 5.0, remove and reinstall the battery.

Note: This deletes all stored information.

Trouble Shooting

If the speed display does not appear:

Be sure the magnet and transmitter are properly aligned, and the distance between them is correct. Cadence model only: If the cadence (C) does not appear, check that alignment of the cadence magnet and sensor is correct.

If the display fades:

Check the battery contacts. Replace the battery if necessary.

Replacing the Transmitter Battery On Wireless Models

Using a coin or screwdriver open the battery cover by twisting counterclockwise. Place the battery into the compartment with the positive side (+) facing up/down. Replace the battery cover.

Use only an alkaline 23A, 12V battery as replacement. Use battery type MN21, 23A, 23AV as replacement for the transmitter.

Waterproof

Your computer was designed to be waterproof. But if you do use the computer in the rain, it is recommended to dry it thoroughly with a dry cloth, making sure to remove the computer from the handlebar mount and drying between the computer and handlebar mount.

Determining Wheel Circumference

In order for the Axiom Cyclocomputer to accurately compute distance and speed, you must enter your actual wheel circumference. There are two methods of determining your wheel circumference: 1) the Tire Size Chart Method or 2) the Roll Out Method (the Roll Out Method gives you a higher degree of accuracy).

Method 1 - Tire Size Chart Method

Using the chart below, locate the size of tire that you will be using on your front wheel. The wheel circumference (in mm) is shown to the right of the tire size.

Example: for a tire size of 700x25, the corresponding wheel circumference is 2086 mm - 2086 is the number you need to program into your computer.

<table>
<thead>
<tr>
<th>Tire Size</th>
<th>Wheel Circumference (mm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>26 x 1.0</td>
<td>1520</td>
</tr>
<tr>
<td>26 x 1.1</td>
<td>1603</td>
</tr>
<tr>
<td>24 x 1.5</td>
<td>1715</td>
</tr>
<tr>
<td>20 x 1.75</td>
<td>1929</td>
</tr>
<tr>
<td>20 x 1.90</td>
<td>1967</td>
</tr>
<tr>
<td>20 x 2.2</td>
<td>2083</td>
</tr>
<tr>
<td>20 x 2.4</td>
<td>2086</td>
</tr>
</tbody>
</table>

Method 2 - Roll Out Method

Stand your bicycle upright. With your tire inflated to its proper pressure, rotate your wheel so that the valve is located at the bottom. Make a mark of the valve's location on the floor. Roll the bicycle one complete wheel revolution, in a straight line, until the valve is again at the bottom. Mark this new location of the valve on the corresponding point on the floor. Measure the distance between the marks, in millimeters. This is the value of the wheel circumference that you need to program in to your computer.

To clear the display on the 5.0, remove and reinstall the battery.

If you are not in wheel circumference setup mode, press the gray button until the ODO, odometer, is displayed on the screen. Press the gray button for two seconds, the kilometer (km/h) and mile (m/h) symbols will alternately be displayed. If the desired measuring units are displayed (i.e. km/h or m/h), press the gray button.

The wheel circumference value of 2124 (or your latest wheel circumference setting) will be displayed.

If you must change the wheel circumference value, wait two seconds and the right digit will begin to change. When the correct digit is displayed press the gray button, the next digit will automatically begin changing. Repeat this process until all four digits display the correct wheel circumference. If the ODO reading is correct, press the gray button six times to exit set up mode.

Note 1: You cannot program the odometer, ODO, in miles mode.

Note 2: Your Axiom computer has the ability to easily convert miles in to kilometers and vice versa. After you configure your initial settings, you may switch measuring units at any time. Press the gray button until the gray button blinks and you will have converted units in your computer.

Wireless Cyclocomputer

Initial Set Up

Your Axiom 5.0 will compute distance and speed functions in either miles or kilometers. After installing the battery the kilometer (km/h) and mile (m/h) symbols will alternately be displayed. The desired measuring unit is displayed (i.e. km/h or m/h), press the gray button. The wheel circumference value of 2124 (or your latest wheel circumference setting) will then be displayed.

If you already know your wheel circumference go to - Programming Wheel Circumference, otherwise go to - Determining Wheel Circumference.

Programming Wheel Circumference and Odometer

When you know your wheel circumference, you are ready to program your wheel circumference into your computer.

If the computer is in the wheel circumference setup mode go to - The wheel circumference value ... (fourth paragraph down).

If you are not in wheel circumference setup mode, press the gray button until the ODO, odometer, is displayed on the screen. Press the gray button for two seconds, the kilometer (km/h) and mile (m/h) symbols will alternately be displayed. If the desired measuring unit is displayed (i.e. km/h or m/h), press the gray button.

The wheel circumference value of 2124 (or your latest wheel circumference setting) will be displayed.

If you must change the wheel circumference value, wait two seconds and the right digit will begin to change. When the correct digit is displayed press the gray button, the next digit will automatically begin changing. Repeat this process until all four digits display the correct wheel circumference. If the ODO reading is correct, press the gray button six times to exit set up mode.

Note 1: You cannot program the odometer, ODO, in miles mode.

Note 2: Your Axiom computer has the ability to easily convert miles in to kilometers and vice versa. After you configure your initial settings, you may switch measuring units at any time. Press the gray button until the gray button blinks and you will have converted units in your computer.

Initial Set Up

Your Axiom 8.0 will compute distance and speed functions in either miles or kilometers. Press the MODE button until ODO, odometer, is displayed. Press both buttons at once for two seconds, the kilometer (km/h) or the mile (m/h) symbols will be displayed. Press the MODE button to toggle between the measuring units (i.e. km/h or m/h). Once the desired measuring unit is displayed, press the RED button to set set up mode.

If you already know your wheel circumference go to - Programming Wheel Circumference, otherwise go to - Determining Wheel Circumference.

Programing Wheel Circumference and Odometer

When you know your wheel circumference, you are ready to program your wheel circumference into your computer.

If the computer is in the wheel circumference setup mode go to - you must change the Odometer units. 

The wheel circumference value of 2124 (or your latest wheel circumference setting) will then be displayed.

If you already know your wheel circumference go to - Programming Wheel Circumference, otherwise go to - Determining Wheel Circumference.
Axiom Series Owner’s Manual  3/30/99 11:56 AM  Page 1 (1,1)

Determining Wheel Circumference

Once the wheel circumference is programmed, the odometer will be shown. Program the ODO in the same manner as the wheel circumference or, if the ODO reading is correct, press the gray button six times to exit setup mode.

Note 2: Your Axiom computer has the ability to easily convert miles into kilometers and vice versa. After you configure your initial settings, you may switch measuring units at any time. Press the gray button until the gray button twice and you will have converted units in your computer.

Replacing the Transmitter Battery On Wireless Models

When a low battery is detected by the transmitter battery cover by holding counterclockwise. Place the battery into the compartment with the positive side (+) facing up. Replace the battery cover. When no battery is in the unit, stored information will be preserved for approximately 15 seconds.

For 5.0: Use a screwdriver to remove the battery cover.

Use battery type MN21 (23A, 12V) as replacement for the transmitter.

Note: This deletes all stored information.

Trouble Shooting

If the speed display does not appear:

- Be sure the magnet and transmitter are properly aligned, and the distance between them is correct.
- Cadence model only: if the cadence (C) does not appear, check that alignment of the cadence magnet and sensor is correct.

If the display fades:

- Check battery contacts. Replace the battery if necessary.

 owners manual 1/30/99 4:05 PM Page 1 (1,1)

Battery Installation and Replacement

Using a coin or screwdriver, open the battery cover by twisting counterclockwise. Place the battery into the compartment with the positive side (+) facing up. Replace the battery cover. When no battery is in the unit, stored information will be preserved for approximately 15 seconds.

For 5.0: Use a screwdriver to remove the battery cover.

Use battery type 2032 (or equivalent) as replacement for the computer.

The 5.0 uses a 76 (or equivalent) battery.

Resetting the Computer

If the display shows irregular numbers, press the AC (Auto Clear) button on the back of the unit. To clear the display on the 5.0, remove and reinstall the battery.

Note: This deletes all stored information.

Trouble Shooting

If the speed display does not appear:

- Be sure the magnet and transmitter are properly aligned, and the distance between them is correct.
- Cadence model only: if the cadence (C) does not appear, check that alignment of the cadence magnet and sensor is correct.

If the display fades:

- Check battery contacts. Replace the battery if necessary.

Mounting the Computer & Transmitter

To mount the computer:
- Slide the computer forward into the mounting unit until it snaps into place with an audible “click” (Diagram 4). To check proper function, activate the computer by clicking the button and then rotating the front wheel. The current speed display should show a reading. To remove your computer from its mount, depress the tab underneath the unit and slide it towards you.
- Position the transmitter unit on the fork blade using the rubber transmitter mount and cable ties, but do not tighten it yet. See Diagram 1.
- Mount the magnet to a spoke directly opposite the sensor. Line up the magnet so that it is centered between the top and bottom lines on the sensor. Tighten the spoke magnet screw, taking care not to overtighten it. See Diagram 2.
- Mount the sensor approximately halfway up the fork blade, but do not tighten it yet.
- The distance between the magnet and the sensor should be 2 mm or less. Once the sensor is positioned properly and centered on the magnet, pull the cable ties tight. Recheck the sensor for proper alignment.
- Mount the sensor at the top of the fork blade, with the battery cover pointed upwards.
- Be sure the magnet and transmitter are properly aligned, and the distance between them is correct.

To reset DST to zero, go to DST mode, then press the RED button for two seconds. AVS, MAX (TRM) will also reset to zero.

ODO: Odometer. This function displays your total distance traveled. See - if you must change the odometer mode... to change the odometer value.

To change the odometer value:
- Slide the computer forward into the mounting unit until it snaps into place with an audible “click” (Diagram 4). To check proper function, activate the computer by clicking the button and then rotating the front wheel. The current speed display should show a reading. To remove your computer from its mount, depress the tab underneath the unit and slide it towards you.
- Mount the magnet to a spoke directly opposite the sensor. Line up the magnet so that it is centered between the top and bottom lines on the sensor. Tighten the spoke magnet screw, taking care not to overtighten it. See Diagram 2.
- Position the transmitter unit on the fork blade using the rubber transmitter mount and cable ties, but do not tighten it yet. See Diagram 1.
- Mount the sensor approximately halfway up the fork blade, but do not tighten it yet.
- Mount the sensor at the top of the fork blade, with the battery cover pointed upwards.
- Be sure the magnet and transmitter are properly aligned, and the distance between them is correct.

Odometer. This function displays your total distance traveled. See - if you must change the odometer mode... to change the odometer value.

Mounting the Computer

The sensor should be mounted to the right fork blade. Using the cable ties, mount the sensor approximately halfway up the fork blade, but do not tighten yet.

The maximum distance between the computer and transmitter should be no more than 24 inches (60 cm). The transmitter should be mounted as close to the handlebars as possible.

Position the transmitter unit on the fork blade using the rubber transmitter mount and cable ties, but do not tighten it yet. See Diagram 1.

Mount the sensor approximately halfway up the fork blade, but do not tighten it yet.

To reset TM to zero, go to TM mode, then press the RED button for two seconds. AVS, MAX (TRM) will also reset to zero.

ODO: Odometer. This function displays your total distance traveled. See - if you must change the odometer mode... to change the odometer value.

Resetting the Computer

Using a coin or screwdriver, open the battery cover by twisting counterclockwise. Place the battery into the compartment with the positive side (+) facing up. Replace the battery cover. When no battery is in the unit, stored information will be preserved for approximately 15 seconds.

For 5.0: Use a screwdriver to remove the battery cover.
- Use battery type 2032 (or equivalent) as replacement for the computer.
- Use a screwdriver to remove the battery cover.
- Use battery type 2032 (or equivalent) as replacement for the computer.

Trouble Shooting

If the display shows irregular numbers, press the AC (Auto Clear) button on the back of the unit. To clear the display on the 5.0, remove and reinstall the battery.
- Note: This deletes all stored information.

Replacing the Transmitter Battery On Wireless Models

Using a coin, open the transmitter battery cover by twisting counterclockwise. Place the battery in the compartment with the positive side (+) facing up. Replace the battery cover.

Waterproof

Your computer was designed to be waterproof. But if you do use the computer in the rain, it is recommended to dry it thoroughly with a dry cloth, making sure to remove the computer from the handlebar mount and drying between the computer and handlebar mount.

Performance Summary

Axion Series Owner’s Manual  3/30/99 11:57 AM  Page 2 (2,1)

Method 1 - Time Size Chart Method

Using the chart below, locate the size of tire that you will be using on your front wheel. The wheel circumference (in mm) is shown to the right of the tire size.

Example: for a tire size of 700x25c, the corresponding wheel circumference is 2086 mm - 2086 is the number you need to program into your computer.

Method 2 - Roll Out Method

Stand your bicycle upright. With your tire inflated to its proper pressure, rotate your wheel so that the valve is located at the bottom. Make a mark of the valve's location on the floor. Roll the bicycle one complete wheel revolution, in a straight line, until the valve is again at the bottom. Mark this new location of the valve on the corresponding point on the floor. Measure the distance between the marks, in millimeters (mm). This is the value of the wheel circumference that you need to program in to your computer. (Note: inches multiplied by 25.4 converts inches into mm, i.e. 1 inch = 25.4 mm).

Battery Installation and Replacement

Using a coin or screwdriver, open the battery cover by twisting counterclockwise. Place the battery into the compartment with the positive side (+) facing up. Replace the battery cover. When no battery is in the unit, stored information will be preserved for approximately 15 seconds.

For 5.0: Use a screwdriver to remove the battery cover.
- Use battery type 2032 (or equivalent) as replacement for the computer.
- Use a screwdriver to remove the battery cover.
- Use battery type 2032 (or equivalent) as replacement for the computer.

Roll Out Method

To check the battery contacts. Replace the battery if necessary.
- Note: This deletes all stored information.

Tire Size Wheel Circumference (mm) Wheel Circumference (mm)

Trip distance. This function calculates your total trip distance.

To reset DST to zero, go to DST mode, then press the RED button for two seconds. AVS, MAX (TRM) will also reset to zero.

ODO: Odometer. This function displays your total distance traveled. See - if you must change the odometer mode... to change the odometer value.

Odometer. This function displays your total distance traveled. See - if you must change the odometer mode... to change the odometer value.

Mounting the Computer & Transmitter

The computer to not function properly.

The distance between the magnet and the sensor should be 2 mm or less. Once the sensor is positioned properly and centered on the magnet, pull the cable ties tight. Recheck the sensor for proper alignment.

Mount the sensor at the top of the fork blade, with the battery cover pointed upwards.

Be sure the magnet and transmitter are properly aligned, and the distance between them is correct.

Cyclocomputer Case and Sensor Method

To calculate the circumference of the tire:

Example: for a tire size of 700x25, the corresponding wheel circumference is 2086 mm - 2086 is the number you need to program into your computer.

Method 1 - Time Size Chart Method

Using the chart below, locate the size of tire that you will be using on your front wheel. The wheel circumference (in mm) is shown to the right of the tire size.

Example: for a tire size of 700x25c, the corresponding wheel circumference is 2086 mm - 2086 is the number you need to program into your computer.

Method 2 - Roll Out Method

Stand your bicycle upright. With your tire inflated to its proper pressure, rotate your wheel so that the valve is located at the bottom. Make a mark of the valve's location on the floor. Roll the bicycle one complete wheel revolution, in a straight line, until the valve is again at the bottom. Mark this new location of the valve on the corresponding point on the floor. Measure the distance between the marks, in millimeters (mm). This is the value of the wheel circumference that you need to program in to your computer. (Note: inches multiplied by 25.4 converts inches into mm, i.e. 1 inch = 25.4 mm).

Battery Installation and Replacement

Using a coin or screwdriver, open the battery cover by twisting counterclockwise. Place the battery into the compartment with the positive side (+) facing up. Replace the battery cover. When no battery is in the unit, stored information will be preserved for approximately 15 seconds.

For 5.0: Use a screwdriver to remove the battery cover.
- Use battery type 2032 (or equivalent) as replacement for the computer.
- Use a screwdriver to remove the battery cover.
- Use battery type 2032 (or equivalent) as replacement for the computer.

Trouble Shooting

If the display shows irregular numbers, press the AC (Auto Clear) button on the back of the unit. To clear the display on the 5.0, remove and reinstall the battery.
- Note: This deletes all stored information.

Replacing the Transmitter Battery On Wireless Models

Using a coin, open the transmitter battery cover by twisting counterclockwise. Place the battery in the compartment with the positive side (+) facing up. Replace the battery cover.
- Use only a alkaline 23A, 12V battery as replacement.
- Use battery type MN21 (23A, 12V) as replacement for the transmitter.

Waterproof

Your computer was designed to be waterproof. But if you do use the computer in the rain, it is recommended to dry it thoroughly with a dry cloth, making sure to remove the computer from the handlebar mount and drying between the computer and handlebar mount.
